SEABASE

Seabase
Waterloo Quay

Our Seabase facility is ideally placed to support projects in the North Sea across all energy industries and acts as an offshore wind operations and maintenance hub, providing a central point for receiving and holding shared inventory across multiple sites.

With its prime location adjacent to Aberdeen harbour, Seabase benefits from significant internal warehouse space, external yard space and the use of Waterloo quayside which includes access to a 120T crane and over 300m of operational berthing, including deep berth space.

Warehouse management

With experience supporting multiple energy majors from our premises at Seabase, Peterson is well placed to design and manage warehousing infrastructure from a central inventory hub.

Through highly trained and competent teams and advanced technology solutions, we have a strong track record in handling high-value and mission-critical assets within highly regulated environments.

We are also experts in inventory management, finding the right balance between planned inventory buffers and fluctuations in demand.

Our warehousing facilities:

+ 1,000m^2 modern internal warehouse facility
+ 2,000m^2 external footprint for packing and short-term storage of oversized material
+ Racking – five levels high, single and double density
+ Electric forklifts/reach trucks deployed to meet client needs
+ RTITB forklift drivers, OPITO trained lifting professionals, multi-skilled and experienced materials controllers
+ Three air conditioned/heated office areas with a total of 30 desk spaces, managed door entry systems, lift access, fire alarm system, meeting rooms and welfare areas
+ Secure car park for up to 20 vehicles

Quayside operations

Peterson runs quayside operations throughout the UK, managing extensive warehouses, port facilities and a dedicated fleet of vehicles. We are specialists in consolidation and sharing, bringing strong capability with a long-term view and a history in industry that supports our foundation of Trust Well Placed.

Waterloo Quay operations:

+ 300m operational berthing (W2, W3, W4)
+ Maximum draft 9m (W2, deep berth)
+ 5,000m^2 cargo laydown area
+ Liebherr 120T harbour crane, forklifts and shunter truck
+ Fuel and water supply available
+ 24/7 onsite manned security, PFSO compliance in accordance with ISPS code, CCTV and secure boundary fencing and gates
+ RTITB forklift drivers, OPITO trained lifting professionals, multi-skilled and experienced quayside personnel
